

MediStreams Releases New Online Configuration Engine

New system allows for real-time development and on-boarding of ERA Normalization rules.

Roswell, Georgia ([PRWEB](#)) September 20, 2017 -- MediStreams, a Healthcare Revenue Cycle Management (HRCM) company, expands their proprietary Configuration Engine; a tool for rapid configuration of custom outputs, commercial 835 / ERA payments and patient payment posting files. Designed and developed by MediStreams, the Configuration Engine allows for rapid deployment of ERA Normalization rules for posting files.

Every healthcare provider is unique, requiring different posting file formats. This is not only due to multiple practice management and patient accounting systems, but also various downstream processes and integrated systems which require unique business rules and output formats. The online Configuration Engine allows MediStreams to create custom output formats and split posting files using an online portal.

“We are very excited about our latest configuration engine release. The new system speeds implementation timelines and gives providers the ability to make and test changes on the fly. For example, the new system allows our technical support team to create and configure custom split output files based on any field within the 835, payment (EFT) or patient payment. Whether at the adjustment, service, claim, or transaction level, multiple splits can be setup in real-time within minutes - all using a user-friendly web-based configuration tool.” John Koch, COO MediStreams.

The Configurations Engine is already integrated with all MediStreams clients using many different AR systems such as EPIC, NextGen, GE Centricity, eClinicalWorks, Imagine, Meditech, Allscripts, CareTracker and many others.

Put MediStreams on your team. MediStreams executives and operations staff are career healthcare revenue cycle experts. Quickly gain the benefits of streamlining your remittance process with features including an online archive with ten-year retention, reporting and data mining, ERA normalization, paper EOB conversion, lockbox services and reconciliation. Our team and our technology helps to simplify all payment processes.
