

MediStreams Simplifies ERA Normalization and Correspondence

Visit Booth 110 at HBMA 2017 Healthcare Revenue Cycle Management Conference September 14-16, 2017

Roswell, Georgia ([PRWEB](#)) August 25, 2017 -- MediStreams, LLC, a leading provider of healthcare remittance automation, will showcase their services at HBMA 2017 in Phoenix, Arizona. MediStreams understands the complexity of healthcare billing and the many facets of the revenue cycle. Billing companies, physician groups, labs and health systems gain benefits of enhanced compliance and regulatory rules with a seamless delivery of posting files, customized for their billing software or other internal systems.

Customization is our key. Our workflows integrate to your clearinghouse, lockbox, and bank to ingest it all-- paper EOBs, claims, correspondence, patient payments, payment files and other associated payer and payment information. We capture, validate, categorize, and distribute all images and data for posting and reconciliation of paper and electronic remittances.

John Koch, COO for MediStreams, said, "Assisting clients with splits of 835 files to multiple PMS or HIS systems, payer splits for hospital claims or setting rules and logic to change how the adjustments are applied on the EOB are just a few examples of our capabilities. We accommodate any number of splits putting in place logic to reconcile back to the deposit date."

Our comprehensive RCM modules provide cost savings to meet the current and future growth of our clients. No more paper. Unlimited users. Fast and easy to use. We customize files for auto-posting, match funded ERAs for reconciliation and sort correspondence for indexing, routing and research. All images and patient data is available on the secure, online portal for search and retrieval; with a ten-year retention. Our team and technology solutions simplify and automate your processes with services for ERA normalization to paper EOB conversion and reconciliation.

MediStreams LLC

MediStreams, Incorporated in 2009, provides outsourced Healthcare Revenue Cycle Management services for healthcare billing entities. MediStreams HIPAA compliant platform automates the flow of healthcare payments with lockbox services, ERA to EFT deposit reconciliation, paper to 835 conversions, patient payment and correspondence processing. MediStreams unique service delivery model accelerates the posting of remittances, eliminates manual processes and significantly reduces overhead costs.
